

Discussion

1. How can we use AI to save time while making sure the information it gives us is correct?

How to check for AI's mistakes? Eg. made-up facts or references?

2. What jobs in research and writing should we let AI do, and what should humans always do themselves? Is it okay for AI to help write a first draft, or should it only be used for checking grammar?
3. The rules say we must tell the journal when we use AI. What information about our AI use is most important to share? Do we need to keep a record of the questions we asked the AI?
4. AI is getting smarter. It will change the landscape of how doctors and researchers work. What new skills will we need to learn?
